

PHASE 3

Enhanced Result Management, Payment Workflow & Additional Modules

1. Enhanced Result Management

2.1 Result Upload & Validation

- Retain the Phase-2 Excel upload as the basic input mechanism.
- Provide a stronger Phase-3 upload workflow with template validation before import.
- Validate application number, applicant, category, stall/shop number, selection status and other configured fields.
- Detect duplicate application/stall records before final import.
- Show import preview with valid, invalid, duplicate and warning records.
- Allow authorized Admin to confirm/import only after validation.

2.2 Result Approval & Publication

- Maintain result status such as Draft / Uploaded / Under Review / Approved / Published.
- Admin can review uploaded results before publication.
- Publish approved category-wise results on the public portal.
- Applicant can search result using application/registration number and/or mobile number.
- Published results are protected from normal editing.
- Any correction after publication must use an authorized correction process and audit log.

2.3 Better Result Management

- Maintain result history/version information.
- Provide category-wise result view and download/export where permitted.
- Maintain selected, waitlisted, not-selected and other configured result statuses.
- Support category-specific waitlist data where applicable.
- Where a result causes cancellation/release, the configured waitlist/re-allotment process can be triggered.

2. Enhanced Payment Workflow

3.1 Payment Setup From Result

- Phase 2 basic payment amount/status is already set from the result/allotment data.
- Phase 3 will provide a more controlled payment mapping based on category, stall/shop, applicant, allotment type and configured fee rules.
- Payment amount, applicable tax/charges, due date and payment status should be visible to Admin.
- Admin can activate or revise payment according to authorized configuration/rules.

3.2 Applicant Payment

- Applicant sees the applicable Pay Now/payment request after result/allotment processing.
- Payment status is updated after gateway confirmation.
- Maintain transaction ID, amount, tax, timestamp and payment response/status.
- Support payment deadline and reminder configuration.
- Payment expiry can trigger configured cancellation/release actions.

3.3 Payment Reconciliation

- Admin can view Paid / Pending / Failed / Expired / Refunded / Manual Verification statuses.
- Provide payment search/filter by application, applicant, category, stall and transaction.
- Maintain payment audit trail.

3. Refund Management

- Refund workflow will be handled in Phase 3 according to configured event/category rules.
- Support refund initiation, processing and completion status.
- Maintain refund amount, reason, related application/payment and timestamps.
- Admin can track pending, initiated, completed and failed refunds.
- Refund actions must be permission-controlled and audited.
- Exact 2026 refund eligibility and amount remain configurable/TBC.

4. Advanced Selection / Result Scenarios

- Support enhanced handling for Physical Auction result entry, including stall, winner, bid amount, EMD/payment status and remarks where applicable.
- Support FCFS, Manual/Department and External/Agency List based result scenarios where configured.
- External/Agency result/list imports require validation and Admin approval.
- Reserved inventory remains outside the general selection pool until released by authorized Admin.
- Selection method remains configurable by event/category.

5. Waitlist & Re-Allotment Support

- Maintain category-wise waitlist where applicable.
- Preserve waitlist priority/order.
- When an allotment is cancelled or released, eligible waitlisted applicants can be considered according to configured rules.
- Promotion/re-allotment actions must be recorded in audit history.
- Final re-allotment remains permission-controlled.

6. Allotment Letter & Secure QR

- Generate final allotment letter after configured allotment/payment conditions are satisfied.
- Include applicant, event, category, stall/shop, location/type, validity, payment details and applicable terms.
- Generate a secure unique QR verification token.
- Provide authorized Admin/staff QR verification.
- Do not expose sensitive applicant information to unauthorized/public QR scans.
- Allow authorized reissue while retaining previous versions in audit history.

7. Document Verification

- Review uploaded applicant documents.
- Mark documents Verified / Rejected / Query.
- Maintain remarks and verification history.
- Verification actions are permission-controlled and audited.

8. RBAC / User Roles & Permissions

- Create/manage Admin and staff roles.
- Control module, data and action permissions.
- Support restricted access for Department Admin, Auction Operator, Verification Team, Police and Report/Viewer roles as applicable.
- Log role and permission changes.

9. Bulk SMS / WhatsApp Reminders

- Send controlled SMS/WhatsApp reminders through the configured provider.
- Support pending payment, result/draw, allotment and other configured reminders.
- Use configurable templates and recipient filters.
- Provider charges remain separate.

10. Admin Two-Factor Authentication

- OTP/code verification for Admin login in addition to password.
- Apply according to configured Admin security policy.
- Record relevant authentication/security events.

11. Assistant / Employee Information

- Allow allotment holder to submit assistant/employee details after allotment.
- Capture configurable identity, mobile, role and photo/document details.
- Allow multiple assistants subject to configured limits.
- Admin can review, approve, reject or deactivate records.
- Assistant pass can be generated if required.

12. Physical Verification

- Verifier login with assigned allotments.
- Search by application/allotment/stall number.
- Scan allotment QR.
- Mark Verified / Discrepancy / Not Present / Revisit Required.
- Upload photographs and remarks.
- GPS only if specifically required and approved by KDB.
- Verification failure may trigger configured review/cancellation workflow.

13. Notifications

- Support configured notifications for result publication, selected/waitlisted status, payment pending/deadline, payment success/failure, payment expiry/cancellation, allotment letter, verification and refund status.
- SMS/email support follows approved provider configuration; WhatsApp remains subject to provider/KDB approval.

14. Audit, Reports & Export

- All Phase-3 result uploads, validations, approvals, publications and corrections must be auditable.
- Payment, refund, waitlist, re-allotment, verification, role and QR actions must be auditable.
- Reports should support application, result, payment, refund, allotment and verification information.
- Exports must be permission-controlled and logged.
